📍 Bangalore, 560068 🌐 <https://akhileshsooji028.github.io/>

Summary

Senior Full Stack Developer with 6+ years of experience designing and developing scalable web applications and cloud-native solutions. Consistent achievement in architecting high-performance systems capable of handling large-scale transactions. Expertise in building secure, efficient microservices, optimizing database structures, and enhancing frontend performance to significantly reduce system response times.

Skills

Backend - Node JS, Hapi JS, Express JS, Hapi JS, Express JS, AWS Lambda, API Gateway, Rest API, ES6+

Frontend - Vue 3 JS, Nuxt 3, React.js (Redux, Hooks), Tailwind CSS, Bootstrap CSS, Handlebars(hbs), Embedded JS(ejs)

Database - PostgreSQL(cockroachDb), MySQL, MongoDB(mongoose)

API Integration - Stripe payment API, Gitlab API, Amazon ads API, Ship Station API, Shippo API, Keycloak

Extras - Github Actions, YAML, AWS EC2, Docker, Nginx, Travis CI, Jenkins, GIT

Professional Experience

WizardTales GmbH | Senior Software Developer

November 2022 – Current

URL: <https://software.opencode.de/>

Location: Bangalore(remote)

Description:

- Orchestrated a centralized project dashboard by interfacing with the GitLab API, providing real-time visibility into 100+ projects and enhancing team collaboration across three departments.
- Implemented intelligent data caching and optimized CRON jobs that minimized API call volume by 70% while maintaining data freshness within 5-minute windows
- Formed data parsing mechanisms to aggregate and normalize project data from multiple platforms, including GitHub, Bitbucket, and GitLab.
- Designed a normalized database schema supporting efficient querying across 1000+ repository records with sub-second response times.
- Integrated enterprise-grade security using Keycloak SSO, implementing role-based access control supporting 200+ organizational users

URL: <https://wx1.de/de>

Location: Bangalore(remote)

Description:

- Architected and progressed a scalable multi-page application using Nuxt 3 from ground up, following advanced SSR optimization techniques
- Executed internationalization (i18n) supporting 2 languages with adaptive content loading, improving international user engagement by 35%
- Produced a performant state management system using Pinia that decreased page load times by 45% and refined user navigation experience
- Planned reusable Vue 3 components with 85% code coverage through unit and integration testing.

WebManufact Pvt Ltd | MERN – Full Stack Developer

March 2021 – November 2022

URL: <https://gateway.mypackageforwarder.com>

Location: Bangalore

Description:

- Implemented a real-time shipping rate calculator integrating Shippo and ShipStation APIs that processed 10,00+ shipment quotes daily with 99% accuracy
- Built an end-to-end order booking system that automated shipment creation, reducing manual processing time by 75% and error rates by 90%
- Created a real-time analytics dashboard with MongoDB aggregation pipelines that visualized KPIs including delivery success rates, order volumes, and user growth metrics
- Configured and maintained AWS EC2 production environments with Nginx load balancing that handled 500+ concurrent users with sub-second response times
- Carried out an automated notification system using Node.js scheduled jobs that increased customer satisfaction by 40% through timely shipping updates
- Integrated and customized Stripe payment gateway supporting multiple currencies, achieving a 98.5% transaction success rate and PCI compliance

URL: <https://www.vapa.ai/en/home>

Location: Vapa – Client Bangalore

Description:

- Engineered data processing pipelines that efficiently handled 100's Amazon product records per User on daily basis
- Performed caching strategies that decreased API response times from 3 seconds to 200ms for frequently accessed product datasets
- Developed interactive visualization components using React and D3.js that transformed complex AI insights into actionable business intelligence
- Initiated and optimized indexing strategies that improved performance by 300% while maintaining data integrity
- Reduced critical backend bugs by 80% through implementing comprehensive error handling and monitoring systems

Dexler Information Solutions, Gyanamite | MERN Stack Developer

April 2020 – March 2021

Location: Bangalore

Description:

- Architected a serverless e-learning platform using AWS Lambda functions that scaled automatically to support 25,000+ concurrent users
- Developed a certificate generation microservice that automatically issued and verified 500+ course completion documents monthly
- Designed a multilingual NoSQL schema supporting content in English, Tamil, and Telugu, expanding the platform's user base by 45%
- Built responsive course catalog and progress tracking interfaces that boosted course completion rates by 35%
- Fulfilled performance monitoring that identified and resolved bottlenecks, improving overall application response time by 60%

7Kutewon Pvt Ltd | MERN Stack Developer

August 2018 – March 2020

Location: Bangalore

Description:

- Came up with responsive frontend dashboard components using React.js and Material UI that lowered bounce rates by 25%
- Created reusable React components library that accelerated new feature development by 40%
- Simplified frontend performance optimizations including code splitting and lazy loading that improved initial load time by 65%
- Collaborated in an agile team environment, participating in daily standups and sprint planning that consistently delivered features on time

Education

- [Gogte Institute of Technology | Belgaum | 2018](#)
Bachelor of Engineering(E&C)
- [Vasantrao Potdar Polytechnic | Belgaum | 2014](#)
Diploma of Higher Education(E&C)

Languages

- English, Marathi, Hindi, Kannada

Certifications

- JavaScript Algorithms and Data Structures Masterclass
- Docker and Kubernetes: The Complete Guide
- Node JS – Advanced Concepts
